A CLASS OF ITS OWN

Transformation Complete

THE VISION OF A NEW CLASS OF BOAT HAS BEEN FULFILLED. THE KORMARAN K7 LUXURY WATERCRAFT COMBINES THE ABILITY TO TRANSFORM ITSELF – CHANGING FROM AN ELEGANT, STABLE MULTI-PURPOSE DAYBOAT TO a sunbathing island – with the comfort of hydrofoils flying over the waves. Whether opting for the agility of a monohull for quick manoeuvres, the stability of a catamaran or a trimaran, gliding over the water on hydrofoils or the comfort of a sunbathing island – the K7 can accomplish it all.

A Veritable Paradigm Shift

The K7 demonstrates the unique engineering ingenuity synonymous with Kormaran and may change the way the world thinks about boating. New standards in engineering with its cutting edge technology make this watercraft unique with a combination of Formula 1 monocoque technology and Le Mans carbon fiber racing technology, aviation lightweight components, as well as America's Cup hydrofoil technology.

The basic version of the K7 is equipped with two powerful marine Rotax engines offering up to 600hp. On top, the upgraded hydrofoil version >>

Unique experiences and fresh driving sensations guaranteed

includes a third engine generating a total power up to 900hp. While gliding in the bathing island mode (trimaran) a speed of 10 km/h/5 kn ensures safety and comfort. In standard driving mode (catamaran), speeds of 70 km/h/38 kn can be reached. While flying in hydrofoil mode, the speed is physically limited to 70 km/h/38 kn due to cavitation effects. The minimum range of 200km (108nm) can be extended by expandable fuel tanks.

Making Dreams Come True

The production of the first edition of the K7 is limited to only 50 masterpieces and is already well underway with the first vessels to be delivered in spring 2017. The design of every single K7 can be fully tailor-made. The Kormaran clientele includes royal families, superyacht and private island owners, search and rescue-, coast guard- and other governmental authorities. Founded in 2010 in Salzburg by Dr. Oliver Kormann and his wife Jutta Kormann, the company's success is based on most acknowledged Austrian and

German carbon fiber-, hydraulics-, hydrofoil- and software specialists.

"Our design is driven by function and emotion while most of the functions are hidden, the emotions are clearly visible, creating permanent values," states Kormaran Inventor, Designer and Owner, Oliver Kormann. To meet customer's expectations, the company's production site in Salzburg is currently being extended by a second assembly line for governmental contractors. Delivery commitments can be met due to long term and sustainable Austrian and German supplier relationships with the automotive, marine and aviation industries.

Driving the Beauty

Unique experiences and fresh driving sensations are to be expected when gliding, driving or flying the K7. The performance with its mighty jet beam propulsion is topped by the futuristic and elegant design. The separate joystick allows for easy and intuitive one-hand manoeuvring in cramped environments like harbours and marinas. With its adjustable height and the newly designed carbon

fiber bathing ladder the K7 enables its owners to get on and off effortlessly.

Passengers can enjoy chilling on the comfortable and spacious sun bathing island under the adjustable Bimini sun sails, which are available in different versions capable of covering the bathing platform, the cockpit or both. Lounge cushions and cosy sun mattresses complement the equipment.
